

RETRACTABLE WATERCRAFT TIE-DOWN & DOCKING SYSTEM

From personal watercraft to yacht-class vessels, our products are designed to help you secure your vessel efficiently without all the hassle you have become use to.

- *Designed for up to 36' craft*
- *Sleek, flush design*
- *Auto-reel mechanism*
- *10 ft of 30,000 lb dock line*
- *Impervious to harsh saltwater*
- *Only 2 moving parts*
- *316L marine grade stainless steel*

U.S. Patent Number: 7,841,287

 **SUNRISE BEACH™**
INNOVATIONS, INC.

Ever since humans first set out on the water, boating has been constantly changing. From the design of the craft to the means of propulsion, everything has been constantly changing. Everything has changed except for one thing, dock line.

Sooner or later, every craft comes in to dock, and you need a way to keep the craft from floating away. In the past boaters have had to put up with messy dock line always getting in the way, coiling and uncoiling, tangling and untangling, you've had to put up with soggy, musty ropes that rot away from the UV rays of the sun. But what could you do? You never had a choice until now. Now there is the **MajicLINE™**, a Space-Age docking system that makes dock line problems a thing of the past. It's a Patented system designed in cooperation with NASA engineers, and it truly eliminates dock line problems once and for all. It's so easy anyone can use it. There's no need to learn complicated knots or tying patterns.

The first thing you'll notice about **MajicLINE™** is that it stores itself, just like a retractable tape measure. Simply let it go and **MajicLINE™** zips back into storage, neatly out-of-the-way. **MajicLINE™** is ideal for any powered craft, especially personal watercraft, where it's almost impossible to store a dock line. Hang a dock line from the personal watercraft and it's likely to get caught in the impeller, so you're dead in the water, looking at hundreds of dollars for repair, but the **MajicLINE™** zips right out of the way, ready to be pulled out when you get to the dock. That's when you'll notice the **MajicLINE™** has another great feature, the **MagicLOOP™** on the end of super strong, Technora® Fiber. You can tie it off with two lines to a single point or multiple points, respective distances apart.

MajicLINE™ spring tension holds your craft securely to the dock, ready to go. So when you're ready to leave, simply slip it off the cleat, and you're ready for fun. No more rope wrestling, so you can get back to enjoying your craft quickly and hassle-free. And isn't that why you got it in the first place?

- *Designed for up to 36' craft*

The MajicLINE™ is perfect for any kind of craft.

What would happen to your powerboat if an old fashion line gets caught around the propeller? Time for weeks in the shop, or maybe a new motor, how much would that cost? **MajicLINE™** eliminates that fear. It's the quickest easiest way to clear the deck and get the most possible enjoyment out of your boat.

No cleats, no problem! Just pass the line through the super-strong loop, and you can loop it around a piling or tie-off of virtually any size or type. The engineered spring action of **MajicLINE™** makes possible docking options you've never had before. You can install the **MajicLINE™** system right on the dock too, that's ideal for dockside restaurants, fuel stations and marinas. Imagine the possibilities. Docking and undocking are made quick and easy, so your guests can float up and tie-off in moments, without even using their own lines. That will give Business a boost!

MajicLINE™ is not only the easiest docking and mooring system you can get, it's also the strongest. MajicLINE™ is extruded from incredibly tough Technora® Fiber, it resists kinks and has a much higher bending-radius.

Love to fish, you'll love using **MajicLINE™** on a drift anchor. Pull in a drift anchor with old-fashioned line and you've got a soggy mess of line all over the deck, but **MajicLINE™** zips right out of the way. You can also use your **MajicLINE™** as the best tie down system you've ever had. MajicLINE™ will hold your precious cargo safely and securely in place, so you can be on your way, without your gear flying around or going overboard.

Whether you do it yourself or have your dealer take care of it, your time has come to take advantage of the greatest leap forward in boating since the paddle. Only NASA technology could make this new docking system possible, so leave behind the annoying frustration of dock lines that haven't changed much in 2000 years. **MajicLINE™** gets you back to the reason you love boating in the first place, so you can enjoy more time out on the water.
